

PROJECT

Create a Tableau Story

A part of the Data Analyst Nanodegree Program

PROJECT REVIEW

NOTES

SHARE YOUR ACCOMPLISHMENT!  

Meets Specifications

Congratulations student! You have successfully fixed the issues addressed in the previous review. Keep doing your awesome job and happy learning! The following resources are very helpful and have great tips on visualization and storytelling if you want to read more about them.

[How to Tell a Story with Data](#)[The bullet graph](#)

Visualization is Explanatory

The visualization centers on a specific, clear finding in the data.

The selected finding is clearly communicated. Design choices foster communication between the reader and the visualization.

Design

A reader's summary of the graphic would closely match the written summary in the writeup, or a reader would identify at least one main point or relationship that the graphic attempts to convey.

The visualization includes interaction or animation. The interaction or animation may be simple, such as a hover, tooltip, or transition. Interaction or animation enhances understanding of the data.

Initial design decisions such as chart type, visual encodings, layout, legends, or hierarchy are included at the beginning of the Design section in the writeup.

Feedback

Feedback has been collected from at least one person throughout the process of creating the data visualization. The feedback is documented in the Feedback section of the writeup.

Great job for listing out the feedbacks!

The project includes evidence that the visualization has been improved since the first sketch or the first coded version of the visualization. All of the feedback is listed in the Feedback section of the writeup. Most design choices and changes are accounted for in the Design section of the writeup. If no changes were made to the visualization after gathering feedback, this decision is explained.

You did great in explaining how you have transformed your initial design into the final version, good job!
